rishiraj-3d-portfolio.vercel.app | Chattogram, Bangladesh

PROFESSIONAL SUMMARY

Full-stack developer building complete, production-style web applications — frontend, backend, database, authentication, and AI/LLM integration — end to end. Shipped 12 independently deployed projects, including two full-stack platforms with real payment processing, structured AI lead-capture pipelines, and documented security hardening. Comfortable across React/Next.js, Node.js, PostgreSQL, and LLM APIs.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Bootstrap

Backend: Node.js, Express.js, Python, Django, REST APIs, Prisma ORM, NextAuth.js, Zod validation

Database: PostgreSQL, Supabase, Neon

AI & Automation: Google Gemini API (structured output), LLM integration, conversational AI, workflow automation

Tools & Deployment: Git, GitHub, Vercel, Netlify, Render, Cloudinary

EXPERIENCE

Independent Full-Stack Developer — AI-Powered Business Applications

Self-Directed / Project-Based | 2025 – Present

- Designed, built, and deployed 12 web applications independently, from initial architecture through production deployment.
- Integrated external services including payment gateways, transactional email, LLM APIs, and public data APIs (weather, crypto, currency, media).
- Applied security hardening across projects: server-side validation of financial data, database-level access control, and dependency-currency audits.
- Started with foundational responsive web development (HTML5, CSS3, JavaScript, React) before moving into full-stack and AI-integrated systems.

SELECTED PROJECTS

DineFlow — Full-Stack Restaurant Ordering & Admin Platform dineflowrestaurantplatform.vercel.app

- Solo build: Next.js 16, TypeScript, PostgreSQL/Prisma, NextAuth.js — 17 API routes, 9 database models, live in production.
- Implemented real online payments (SSLCommerz) with dual redirect-and-webhook confirmation sharing one idempotency guard, so a payment can never be double-processed.
- Modeled order fulfillment and payment as independent states to correctly represent cash-on-delivery orders; every price is recalculated server-side at checkout.
- Enabled PostgreSQL Row-Level Security after an automated scan flagged the gap, and migrated off an end-of-life Next.js version to close a known vulnerability.

GariGhor Motors — AI-Powered Car Dealership Platform garighor-motors.vercel.app

- Solo build: React, Node.js/Express, Prisma, Neon PostgreSQL — 35+ components, 9 API endpoints, 4 database models.
- Built an AI lead-capture assistant on Google Gemini's structured JSON output, with independent code-level validation of every response before it reaches the database.
- Built a non-AI fallback booking form posting to the same backend endpoint, so lead capture never depends on the AI being available.
- Added a deduplication window and automatic retry with backoff to prevent duplicate leads and handle API rate limits.

Additional Projects: 10 further deployed apps — dashboards, financial trackers, productivity tools — full list at github.com/IamRishiraj1/repositories

CERTIFICATIONS

Full Stack Web Development — Interactive Cares (Interactive Ventures Limited), 6-month program

Frontend Web Development — Programming Hero, Batch 06

Cybersecurity Professionals Training (78 hrs) — IT Business Incubator, CUET & Diligite Ltd.

Aspire SkillUp Digital Skills Training Program — Aspire Education Foundation
